

Network Boost

harness your data flows
and **speed up** information
exchange

“Eighty-three percent of companies are unable to identify, in any detail, the applications circulating on their networks.”

- Network Boost is a managed service designed to improve the performance of the applications on your network by defining priorities and speeding up application flows, thus resulting in a better service for your users
- you gain complete visibility of both your application flows and usage on your network
- you retain control over your information system, by means of real-time decision-making aids
- your network can constantly adapt to handle additional data exchanges and the development of new applications

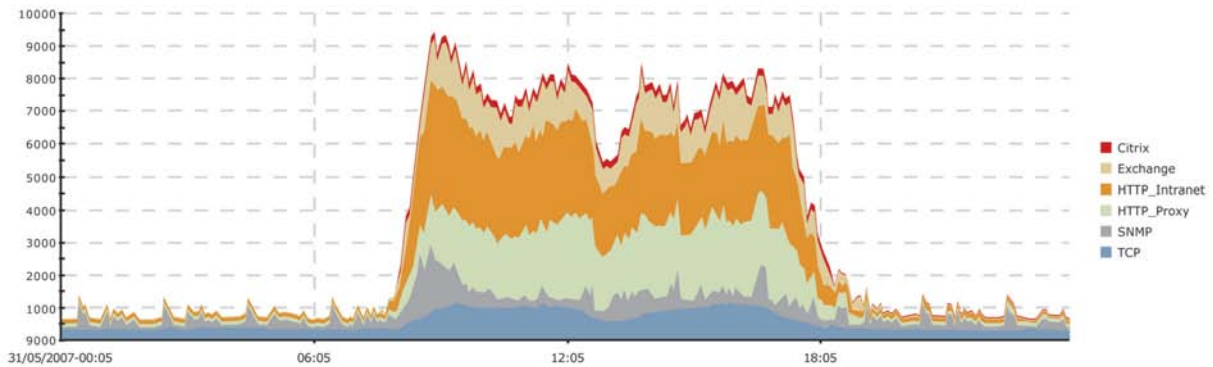

Business
Services

optimize control

- we activate dynamic mechanisms to manage priority between user sessions
- you monitor the performance for your information systems in real time

choose your settings

- together, we define and position the appropriate application performance target levels for your activity and your IT environment
- you receive personalized support to deploy and maintain your solution

speed up information exchange

- your delays are shorter, thanks to compression and acceleration functions
- your information exchanges are more fluid and your quality of service is enhanced

good to know

We commit to application performance, and we optimize and speed up your critical data flows.

With Network Boost you permanently improve the quality of your network, even as perceived by your end users. You receive the same guaranteed quality of service for all your sites and all your subsidiaries in 150 countries and territories, thanks to our local teams.
